HabweID
RFID Identification

Highlights:

- Unique and permanent pet ID
- Handy and painless microchip implantation
- ICAR approved for registration
- ISO 11784/ISO 11785 International standards of animal identification
- 6 one-dimensional barcode, sterilization by EO gas
- Anti-migration system with parylene coating microchip
- 100% read feedback

Product description:

Each transponder is pre-loaded into a disposable implanter, sterilized by EO gas and individually packed with 6 adhesive bar-coded labels. The syringe is designed for maximum ergonomic comfort (thanks to its lugs for the index and middle fingers).It allows the most natural approach and body language during the implantation process (it can be easily held in one hand without frightening the pet) and it comes ready to use (no assembly required). Plus, its no-return click system is an additional safety feature for the practitioner: it blocks the injector in the ''depressed position'' which stops the transponder being sucked back into the syringe by the piston. This little ''click'' indicates that the transponder has been correctly positioned.

Technical Data:

Model:	BW12
Dimensions (L x Ø) :	12x2.12mm
Weight:	0.03g
Housing material:	Bio-compatible glass
Operating temperature:	-40° C to +70° C
Storage temperature:	-40° C to +70° C
ID code:	15 digits conforming to ISO Standard 11784/85
Working frequency:	134.2 kHz, FDX-B
Parylene coating:	Yes
Material of Injector:	Polypropylene
Dimension of Injector:	124x46x12mm
Label sticker:	6pcs
Sterilization:	EO gas, 5 years' guarantee
Individually pack:	Sterilized pouch
